35    }  
36  }  
37 ]  
38 }
```

Properties

Name	Type	Description	Required or Optional	Available Version
addedObject	Map<String, Object>	Details of the object that's being added. This property supports fields of objects from the Sales Transaction context definition, including custom objects and fields in your extended context definition.	Required	60.0
path	String[]	Path to the node that's being added. The path includes the unique ID of the context node in the data structure. This ID must match the ID of the sales transaction item source such as a quote line or an order line item. Keep these considerations in mind when setting the path value. • If the <code>businessObjectType</code> property value is <code>QuoteLineItem</code>, the path must contain 2 IDs. The first ID is the quote ID, and the second ID is the quote line item ID. • If the <code>businessObjectType</code> property value is <code>QuoteLineItem</code>, the path must contain <code>SalesTransactionItemSource</code>	Required	60.0

Try for free

SalesTransactionItemParent.

- If the businessObjectType property value is QuoteLineItemRelationship, the path must contain 3 IDs. The first ID is the quote ID. The second ID is the quote line item ID. The third ID is the quote line item relationship ID.
